SAFETY & SECURITY FEATURES

PARKSENSE® REAR PARK ASSIST[11]/// When the vehicle is in Reverse, the system can sense objects at low speeds; if imminent collision is detected, the system will provide a momentary, autonomous brake pulse. In certain circumstances, this system can help bring the vehicle to a stop. Available.

RAIN BRAKE SUPPORT ////When the windshield wipers have been activated, the system pulses the brake pads closer to the spinning rotors, helping to keep the rotors and pads dry for greater control and operator security. Standard.

BLIND SPOT MONITORING (BSM)[12] WITH REAR CROSS-PATH DETECTION[11] /// Radar continually monitors rear vehicle blind zones and will visually and audibly alert the driver when a vehicle is sensed in the zones. When in Reverse, rear sensors warn through a chime if cross-traffic approaches the vehicle. Available.

ADAPTIVE CRUISE CONTROL (ACC)^[13] WITH STOP ////Helps maintain distance from the vehicle ahead; under certain traffic conditions, the system can bring the vehicle to a full stop without driver intervention. Available.

FORWARD COLL ISION WARNING (FCW)^[14] WITH ACTIVE BRAKING////Forward-facing radar sensors detect when the vehicle may be approaching another object too rapidly and the system alerts the driver with both an audible chime and a visual warning. Available.

PARKVIEW® REAR BACK-UP CAMERA[11]///This system displays an accurate visual reference of what is behind the vehicle when it's in Reverse. Available.

READY ALERT BRAKING (RAB) ////The system anticipates situations when the driver may initiate an emergency brake stop and uses the Electronic Stability Control (ESC)^[7] pump to precharge the brake system in order to decrease the time required for full brake application. Standard.

ELECTRONIC STABILITY CONTROL (ESC)^[7] ///This system is designed to assist drivers in maintaining control of their vehicle during extreme steering maneuvers. ESC^[7] senses when a vehicle is starting to spin (oversteer) or plow (understeer), and attempts to correct the vehicle's course by automatically controlling the throttle and applying the brakes at individual wheels. Standard.

ALL-WHEEL DRIVE (AWD) ////A system that automatically detects wheel-slip and sends additional power to the wheels with the most traction. Available.

ANTILOCK BRAKE SYSTEM (ABS) //// Standard four-wheel antilock disc brakes sense and prevent wheel lockup, offering improved steering control under extreme braking and/or slippery conditions. Standard.
